

Classes Overview

The primary classes used to display `ListView`s are shown here:

The purpose of each class is described below:

- ➔ **ListView** – user interface element that displays a scrollable collection of rows. On phones it usually uses up the entire screen (in which case, the `ListActivity` class can be used) or it could be part of a larger layout on phones or tablet devices.
- ➔ **View** – a `View` in Android can be any user interface element, but in the context of a `ListView` it requires a `View` to be supplied for each row.
- ➔ **BaseAdapter** – Base class for `Adapter` implementations to bind a `ListView` to a data source.
